Data Management and Sharing Plan

Dir for Tech, Innovation, & Partnerships ⓘ

Complete the Data Management and Sharing Plan for the primary Directorate you are applying to, or provide a justification if a detailed Data Management and Sharing Plan is not needed. Refer to the funding opportunity for specific guidance on how to complete this section. This section may not be used to circumvent the Project Description page limit.

☐ A detailed Data Management and Sharing Plan is **not needed** because the project will not produce data or research products, or for another reason that will require a justification.

Data Management and Sharing Plan (PAPPG)

* Required

* Data and Research Product Categories Add Data or Research Product Category ⓘ		
Category ⚡	Description	Actions
RedTwin Software Framework	Open-source agentic software framework comprising the Knowledge Base, Observer, Replication, and Red Team agent systems, plus supporting tools for infrastructure capture, digital-twin construction, and automated vulnerability/exploit-chain analysis (extends prior tools including ChainReactor and the Universal Theory of Exploitation). Also includes upstream code contributions to the project's two anchor open-source products: hardening patches, a configuration-defect checker, and differential proxy-upstream smuggling tests for nginx, and safety/discovery extensions (impact-budgeted scheduling, knowledge-graph-native output, richer fingerprinting, incremental re-scan) for ZMap.	Edit Delete

Additional Single Copy Documents

* Data and Research Product Categories		
Category	Description	Actions
Reference Test Networks & Evaluation Benchmarks	Suite of reference test networks built from widely-deployed open-source components, fully described via infrastructure-as-code, with known topology, configuration, and seeded/planted vulnerabilities requiring multi-step chains; associated ground-truth knowledge graphs; and challenge materials (meta-information bundles) from the annual digital-twin CTF competition.	Edit Delete
Data and Findings from Partner/Operational Network Engagements	Knowledge-base captures, observed network topology and service-dependency data, and vulnerability findings generated from RedTwin's application to UCSB's and ASU's internal research networks and to external industry/critical-infrastructure partner systems.	Edit Delete
Publications	Technical reports, journal articles, and conference papers (target venues: IEEE S&P, ACM CCS, USENIX Security, NDSS), including vulnerability disclosure reports shared with upstream open-source maintainers.	Edit Delete
